

# Tool-free custom enclosures

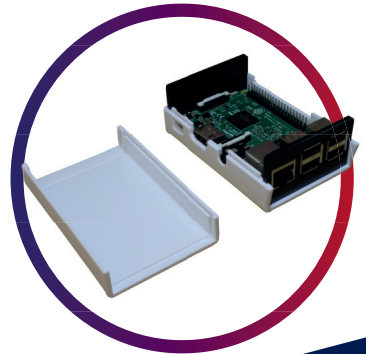

## FLEXIBLE DESIGN

Advanced 3D CAD-CAM system and flexible design process, to partner your project from any start point and throughout every stage of its development. With 3D models and 2D drawings produced for feedback and adjustments prior to final design sign-off.

## RAPID PROTOTYPING

Prototype enclosures designed for manufacture, produced via our tooling free process and fully evaluated by our design team. Your product is ready for testing and field trials, minimising development time and pre-production costs.

## PRODUCTION READY

Seamless transition into production using the same technology and allowing flexible design modifications post prototype sign-off. Produced in low to medium start-up quantities or volume production against scheduled deliveries.

**Your single board computer or development board product enclosed in a custom fabricated plastic enclosure with no tooling costs.**

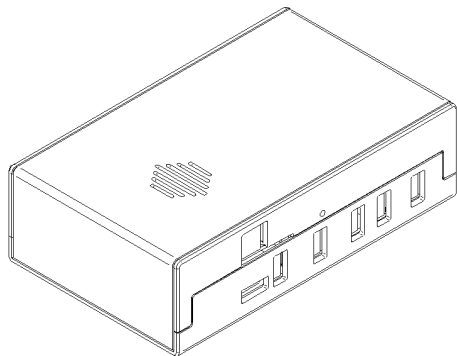

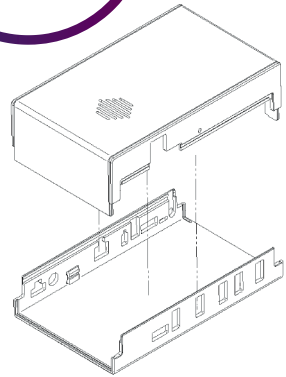

We offer enclosure design, prototyping and manufacture with reduced lead times at every stage. You retain design flexibility and achieve a low cost enclosure, to your specification with a reduced time to market.

**TOOL-FREE  
CUSTOM ENCLOSURES**

We'll give you the flexibility to design your enclosure, branded to suit your requirements with our in-house print facility. Choose your material, colour and assembly method, specify your board and components.....we'll do the rest.

The ideal start up solution, capable of taking you into full batch production.

**CONTROL START UP COSTS  
RETAIN DESIGN FLEXIBILITY  
REDUCE TIME TO MARKET**
